

# Win TG Pro™

Introducing Win TG Pro (Windows Tank Gauging Professional) -- software designed for the operation and management of petrochemical storage tanks. If you're looking for a simple and cost-effective solution for your tank monitoring needs then look to Win TG Pro.

Win TG Pro provides the following integrated functions:

- Alarms monitoring
- Historical and event logs
- Net volume and inventory calculations
- Screen and printed reports
- Elegant graphic user interface

In addition to setting new standards in reliability, ease of configuration and maintenance, Win TG Pro goes further by providing seamless scalability from one user to a complete enterprise wide solution.

## Reliable

Gauging Systems, Inc. has more than 19 years of experience in the Level/Mass tank gauge industry coupled with over 16 years of direct experience writing tank-gauging software. Currently Gauging Systems, Inc. has four software product suites and hundreds of installations worldwide.

Our strong relationship with Microsoft represents our true dedication to excellence. In fact, Gauging Systems, Inc. was the first tank gauging software and hardware manufacture to qualify for the Microsoft Certified Solution Provider program back in 1995. As the operating system industry changes, you can trust that Gauging Systems, Inc. will be on the forefront.

## Scalable

Integrated at the heart of the Win TG Pro's architecture is true scalability. This feature allows the building and configuration of solutions that blend well with customer needs and MIS requirements.

As a true measure of performance and scalability, Win TG Pro will run on Windows 2000, XP, NT 4.0, NT 3.x , Windows 98, or Windows 95.

Modular

It's no secret that providing modularity can make a significant difference in the application of software. That's why Win TG Pro has been designed from the beginning to be modular. It consists of three basic parts: Client, Server, and Drivers. It can be combined to run stand-alone (single PC) or over a distributed Client-Server application.

## User Friendly

A true user-friendly software application is a challenge for any programming team. This is especially true in complex applications such as the monitoring of petrochemical storage tanks. With the added complexity of drivers for new technology such as the Gauging Systems, Inc. MTG "Multi-function Tank Gauge", the tank calculation portion has required further expansion of data such as density and temperature stratification, percentage of water suspended in product, vapor monitoring and alarms, and among others, leak detection. The use of this data requires application specific displays, reports and alarms in order to realize the benefits from this technology. However, Win TG Pro allows the user to easily configure the software for the data displayed, alarms, applications, and drivers they need.

Win TG Pro has an extensive library of drivers supporting tank-gauging equipment manufactured over the past 40 years.
